

## **Carroll Walker**

Carroll Walker has well over 20 years of implementing technology in the classroom. He started his career with a multimillion dollar grant to setup and implement a state wide videoconferencing network working with a statewide team. High tech classrooms connected students to teachers from far locations and provided new ways to deliver our educational services. Over the years the network has been re-engineered to utilize the faster and more flexible internet broadband connections available. The offerings for educational services and a “virtual classroom” environment grew due to the availability of high speed internet access. Today Carroll trains and supports a large number of interactive classrooms and live classroom archiving systems. Carroll is also incremental in the design of Smart classroom control systems, cameras and all the technology needed to have high end classrooms of the future. He has consulted and designed very successful distance learning programs allowing highly interactive experience for students connecting them with instructors.
